Current Cigarette Use Among Youth

*Not all states have data reported.

Centers for Disease Control and Prevention (CDC). State Tobacco Activities Tracking and Evaluation (STATE) System. Updated 3/2016

Current Cigarette Use Among Youth

*Not all states have data reported.

Centers for Disease Control and Prevention (CDC). State Tobacco Activities Tracking and Evaluation (STATE) System. Updated 12/2015

Based on OSHData dataset: Youth Risk Behavioral Surveillance System (YRBSS) Data

1993, 1995, 1997, 1999, 2001, 2003, 2005, 2007, 2009, 2011, 2013. Centers for Disease Control and Prevention (CDC). State Tobacco Activities Tracking and Evaluation (STATE) System. YRBSS Data. The YRBS is conducted biennially and collects data on a variety of youth risk behaviors including tobacco use. The YRBS uses a two-stage cluster sample design to produce representative samples of students in high schools (grades 9-12). The YRBS uses SUDAAN to calculate asymmetric confidence intervals based on the logit transformation. The logit transformation constrains confidence interval limits to vary between a lower limit of 0% and an upper limit of 100%. The data for the STATE System were extracted from YRBSS surveys from participating states. Tobacco topics included are cigarette smoking prevalence, cigarette smoking frequency, and smokeless tobacco products prevalence.
